10.0 OPERATING CONTROLS AND LIMITS

10.1 TECHNICAL SPECIFICATIONS

On November 30, 2004, the Nuclear Regulatory Commission issued Materials License, SNM-2512 (Ref 10-1) to authorize the receipt, storage, and transfer of spent nuclear fuel at the Idaho Spent Fuel (ISF) Facility. This License, which includes the Technical Specifications, provides the functional and operating limits, limiting conditions for operations, surveillance requirements, design features, and administrative controls appropriate to the ISF Facility. The ISF Facility License, including the Technical Specifications, contains restrictions that limit facility conditions consistent with the ISF Facility design requirements for the safe receipt, handling, and interim storage of spent nuclear fuel as described in this Final Safety Analysis Report.
