GENERAL NOTES:

1. INSTALL MEFANAL PIPING IN ACCORDANCE WITH MANUFACTURER'S INSTRUCTIONS PROVIDED WITH MATERIAL.

2. CORE DRILL CONCRETE TO ACHIEVE MINIMUM 1/8" SLOPE. CORE DRILL MAY CUT WALL REINFORCING STEEL.

3. WATERPROOF CONCRETE AROUND PERIMETER AND AROUND PIPES WITH 3-LAYER, 6-OZ. bitumen-impregnated felt. TO PROVIDE WATER TIGHT SEAL UPON CORE INSTALLATION.

4. UNLESS OTHERWISE SPECIFIED, TOLERANCES ARE ±1/8".

CONSTRUCTION NOTE:

D-201 MAY REQUIRE THE USE OF HARD PIPING INSTALLATION. THIS WILL REQUIRE THE ACHIEVEMENT OF A MINIMUM SLOPE OF 1/8" TO EACH DRAIN manifold. THIS SLOPE IS IMPORTANT TO ELIMINATE THE POSSIBILITY OF PRESSURE TESTS THAT MAY OCCUR ON THE MANIFOLDS. THE PIPE INSTALLATION SHOULD BE PERFORMED WITH A SLOPE OF 1/8" DURING THE FABRICATION OF THE MANIFOLDS.

CORRECTION TO PLAN VIEW:

1. ADD DETAIL TO SHOW DETAIL OF DRAIN MANIFOLD INSTALLATION.

2. CORRECT DIMENSIONS ON PLAN VIEW TO 1/8".

SCHEDULE 1/8" = 1'-0"
